

## ● INCUBATION AND CAMPUS COLLABORATION PROPOSAL

# Request for incubation status, office space, and a student talent pipeline at GAT.

Excentrix is a Bangalore-based technology venture developing AI-enabled proof-of-work and skill-verification systems for education and industry. Founded by alumni of Global Academy of Technology, we seek formal incubation, dedicated workspace, and a structured internship partnership with GAT to establish a durable industry-academia collaboration on campus.

## 01

**Founder statement and institutional intent.** As an alumnus of Global Academy of Technology, returning to GAT to incubate Excentrix represents an opportunity to convert alumni experience into institutional value. The aim is to bring live product development, applied AI engineering, and sustained industry engagement back to campus in a form that is visible, practical, and beneficial to students.

### WHY THIS MATTERS NOW

#### FRICTION 01

##### Technical learning still lacks credible evidence

Students complete substantial work, yet institutions often lack a dependable method to convert that work into portable and verifiable proof of capability.

**Institutional gap:** work exists, but evidence remains fragmented.

#### FRICTION 02

##### AI has weakened traditional hiring signals

Polished portfolios, resumes, and repositories are now easier to generate at scale. Establishing genuine ownership and applied depth has become materially harder.

**Institutional gap:** presentation quality no longer confirms capability.

#### FRICTION 03

##### Campus-industry integration remains limited

Students benefit most from exposure to real product environments, while institutions increasingly need measurable, industry-linked outcomes.

**Institutional gap:** stronger continuity is needed between campus and practice.

### FOUNDER AND ALUMNI CONTEXT

Siddharth Karthikeyan, Founder & CEO of Excentrix, is a B.E. Artificial Intelligence & Data Science alumnus of Global Academy of Technology. The objective is not merely to operate from campus, but to establish a functional bridge between academic rigor and real-world technology deployment through live products, active engineering work, structured internships, workshops, and an alumni-led innovation presence within GAT.

## CORE TECHNOLOGY AND PRODUCT STACK

### horizon

AI LEARNER  
OPERATING SYSTEM

[HORIZON.EXCENTRIX.TECH](#)

An adaptive AI mentorship platform that models how each learner progresses and translates that understanding into a structured daily learning path.

- Conversational AI mentor with memory
- Dynamic learner model and daily plan generation
- Diagnostic skips and spaced repetition loops
- Verified skill portfolio and artifact publishing

### VELO

TRUTH-AS-A-SERVICE  
PLATFORM

[EXCENTRIX.TECH](#)

A verification engine that examines real codebases to assess genuine technical competency and strengthen trust in candidate evaluation.

- Forensic developer code auditing
- Interactive logic questioning and truth scoring
- Evidence-backed recruiter trust protocol
- Proof-of-work verification for education and hiring

## SUPPORT REQUESTED FROM GAT

| RESOURCE AREA                  | SPECIFIC REQUEST                                                                    | OPERATIONAL REQUIREMENT                                                                                                           |
|--------------------------------|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 1. Incubation status           | Formal incubation under the GAT Innovation and Incubation Cell / TIDE program.      | Institutional recognition, stronger eligibility for collaborative programs, and formal inclusion within the innovation ecosystem. |
| 2. Campus office space         | Dedicated workspace with 4–6 workstation capacity inside the incubation wing.       | Basic office infrastructure, reliable internet access, and periodic use of meeting facilities.                                    |
| 3. Student internship pipeline | Structured channel to recruit 3rd and 4th-year students across AI&DS, CSE, and ISE. | Access to campus talent for AI engineering, software development, and product-oriented roles.                                     |

## RECIPROCAL VALUE TO GLOBAL ACADEMY OF TECHNOLOGY

### Applied engineering exposure for interns

Student interns would contribute to live software systems spanning modern web engineering, AI workflows, and product development practices aligned with current industry requirements.

### Early access to Horizon for campus use

GAT students may receive early access to Horizon, creating a structured pathway to build demonstrable and verifiable skill profiles beyond conventional resumes.

### Alumni mentorship and technical engagements

The Excentrix team can support workshops, technical reviews, office hours, and focused engagement sessions for student cohorts.

### Institutional innovation visibility

Hosting an active alumni-led venture on campus can strengthen GAT's innovation, entrepreneurship, and industry-academia narrative across institutional reporting and external positioning.

## PROPOSED TIMELINE

| PHASE   | ACTION ITEM                                                                                     | TARGET TIMELINE              |
|---------|-------------------------------------------------------------------------------------------------|------------------------------|
| Phase 1 | Presentation of the venture, proposal, and supporting material before the incubation committee. | Within the next 1 to 2 weeks |
| Phase 2 | Formal approval, documentation, and workspace allocation within the incubation centre.          | Following approval           |
| Phase 3 | Initiation of the student internship pipeline and on-campus onboarding process.                 | Immediately following setup  |

## WHAT WE WOULD WELCOME

- An opportunity to present the venture, product direction, and proposal before the management and incubation evaluation committee.
- A discussion on how GAT may serve as an active operating base for an alumni-led AI venture with meaningful student and institutional engagement.
- A practical pathway toward formal incubation, workspace support, and recurring access to student talent.

## CLOSING NOTE

This proposal is submitted with a clear objective: to build meaningful institutional value within the same academic ecosystem that helped shape the founding journey. Excentrix would value the opportunity to grow at GAT not only as a venture, but as a working bridge between students, faculty, and contemporary AI product development.
